

THREAT INTELLIGENCE BRIEF

Prepared By Ishaan Malhotra

Incident Type	Coordinated Inauthentic Behavior (CIB) & Influence Operations	Investigation Date	June 27, 2026
Target Network	thinkingcraftsman / delhinativeclub Matrix	Analyst Classification	HIGH PRIORITY
Primary Tactics	Regional Friction Amplification, Location Spoofing, Identity Hijacking	Actor Status	Unmasked (Visual Profile Fixed; Real Name Unverified)

1. Executive Summary

This brief document details the multi-platform, coordinated inauthentic behavior network operating across social channels targeting local demographics in India, explicitly aiming to foment tension regarding regional, ethnic, and migrant status. While the threat actor employs sophisticated social engineering tactics—including multi-account echo chambers, physical facial obfuscation in recent stages, and virtual private routing—glaring operational security (OPSEC) failures at the launch of the campaign have allowed complete structural mapping and visual exposure of the primary handler.

2. Infrastructure Mapping & Creation Timeline

Analysis of metadata indicators, registration logs, and campaign updates confirms a deliberate, structured rolling deployment rather than organic community growth. The infrastructure maps cleanly to a four-tier operational lifecycle:

Asset Handle	Deployment Date	Operational Intent	Tactical Vulnerabilities Identified
thinkingcraftsman	January 2025	Long-term ideological anchor and narrative testing node.	Fatal OPSEC Failure: Early broadcast footage exposed the actor's unmasked face, spectacles, attire, and interior environment features before masking tactics were adopted.
delhinativeclub	November 2025	Central narrative repository and "grassroots facade."	Synchronized launch window with front-line burner. Acts as explicit targeting node in comment sections.
stopcolonizationofdelhi	November 2025	Aggressive front-line engagement page targeting regional groups.	Coordinated cross-tagging, simultaneous platform deployment metadata links it explicitly back to the central hub.
dilli_is_not_for_sale	June 2026	Disposable tactical distribution node.	Environmental OPSEC Failures: Video backgrounds caught Left-Hand Drive (LHD) vehicle dashboard indicators and geographic snowbanks inconsistent with native claims.

3. Narrative Analysis & Core Intentions

The campaign focuses heavily on manufactured regional friction. The primary strategy relies on uniting completely disparate native groups by designating an explicit, collective adversary profile.

Definitive Intent Acknowledgment

*During public feedback interrogation regarding a modified 18th-century Western historical cartoon ("Join, or Die") adapted for regional Indian demographic blocks, the primary operational hub account (delhinativeclub) directly confirmed its specific targeting criteria in plain text: **"Punjabis and other state migrants."***

The exploitation of Western historical motifs (e.g., Benjamin Franklin's 1754 colonial snake cartoon) strongly indicates an operative heavily exposed to North American cultural, educational, or media materials, adapting familiar Western tropes due to lack of authentic localized integration.

4. Geographic Camouflage & Physical Discrepancy Analysis

The operator actively maintains a localized cover story to project regional legitimacy, claiming a physical base of operations in **Palam, Delhi, India** via platform location text fields and a Change.org regional partition. However, cross-examination of hard physical indicators overrules the user-supplied string data:

- **Automotive Mechanics:** Video data shows a vehicle interior with distinct Left-Hand Drive (LHD) configurations and standardized Tesla instrumentation, signaling operations outside the Indian subcontinent.
- **Climate Data:** Multiple background pans reveal significant frozen accumulation and geographic snowbanks during seasonal windows physically impossible for the stated NCR location.
- **Platform Accessibility:** Direct use and streaming native to networks such as TikTok (which maintains an absolute infrastructure ban within India) firmly place the physical uplink node within North America (the United States or Canada).

5. Visual Fingerprinting & Facial Recognition Bypass

Although later phases of the campaign shifted toward structural masking (using hoods, paper coverings, and strategic lighting), early content published directly via localized curation accounts left a permanent unmasked biometric footprint.

Facial visual indexing maps this physical identity directly across international media aggregates (MSN, News9Live, Business Today) stemming from a viral social media clip tracking a self-reported "violent incident in Canada" around early 2025. This permanent public indexing connects his physical face unalterably to the operational accounts.

6. Identity Status & Natural Open-Source Ceilings

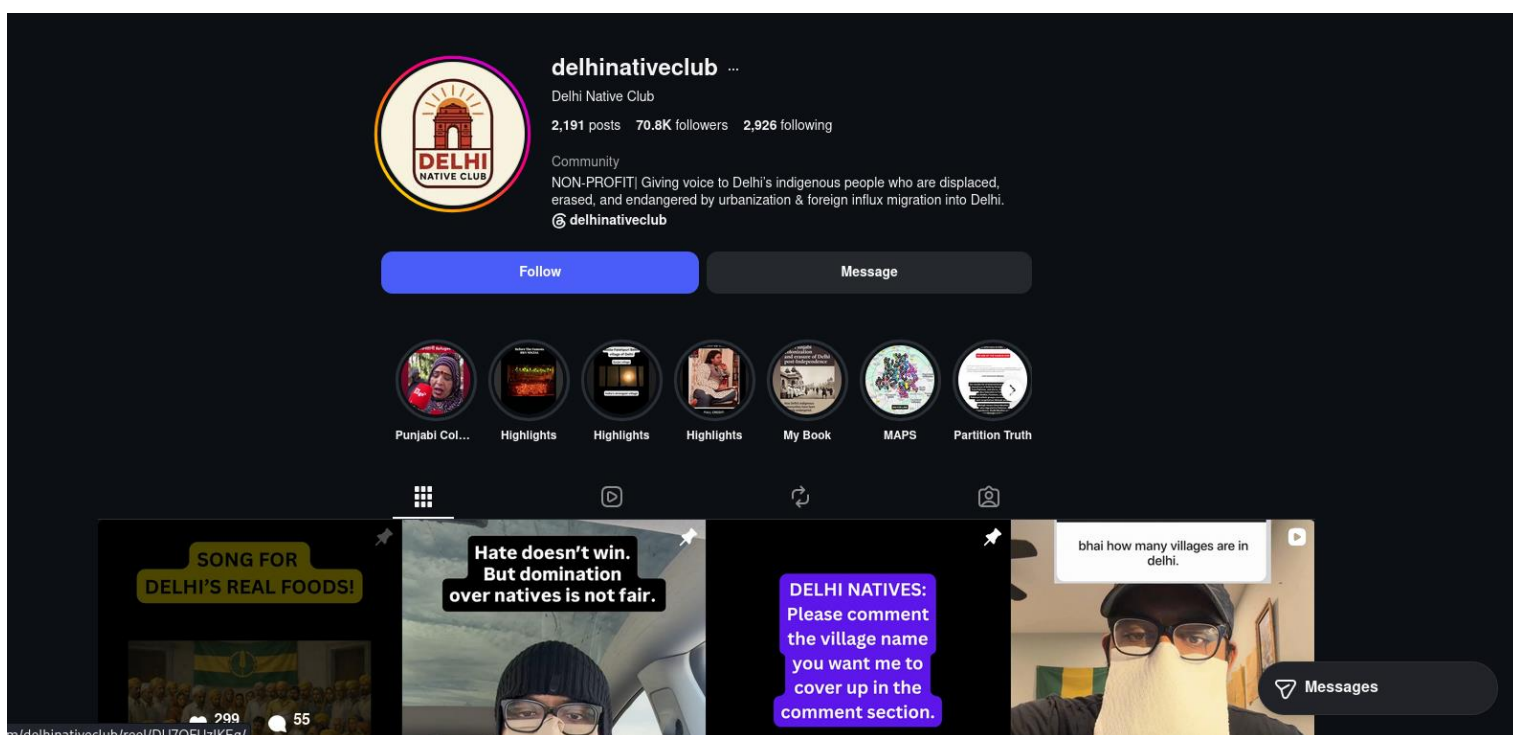

While the campaign's structural timeline, strategic intent, and geographic parameters are 100% verified, the primary operator's verified **legal name remains unconfirmed** due to typical open-source ceilings:

- The name "*Pratyush Yadav*" surfaced exclusively via historical Change.org initial petition records corresponding to the launch timeline.
- While culturally consistent with the campaign's targeted appeal to specific regional agrarian communities (Yadav/Gurjar blocks), it cannot be authenticated as a verified legal identity without direct network traffic analysis (IP/ISP logs) or unredacted registration databases.

7. Recommended Action Matrix

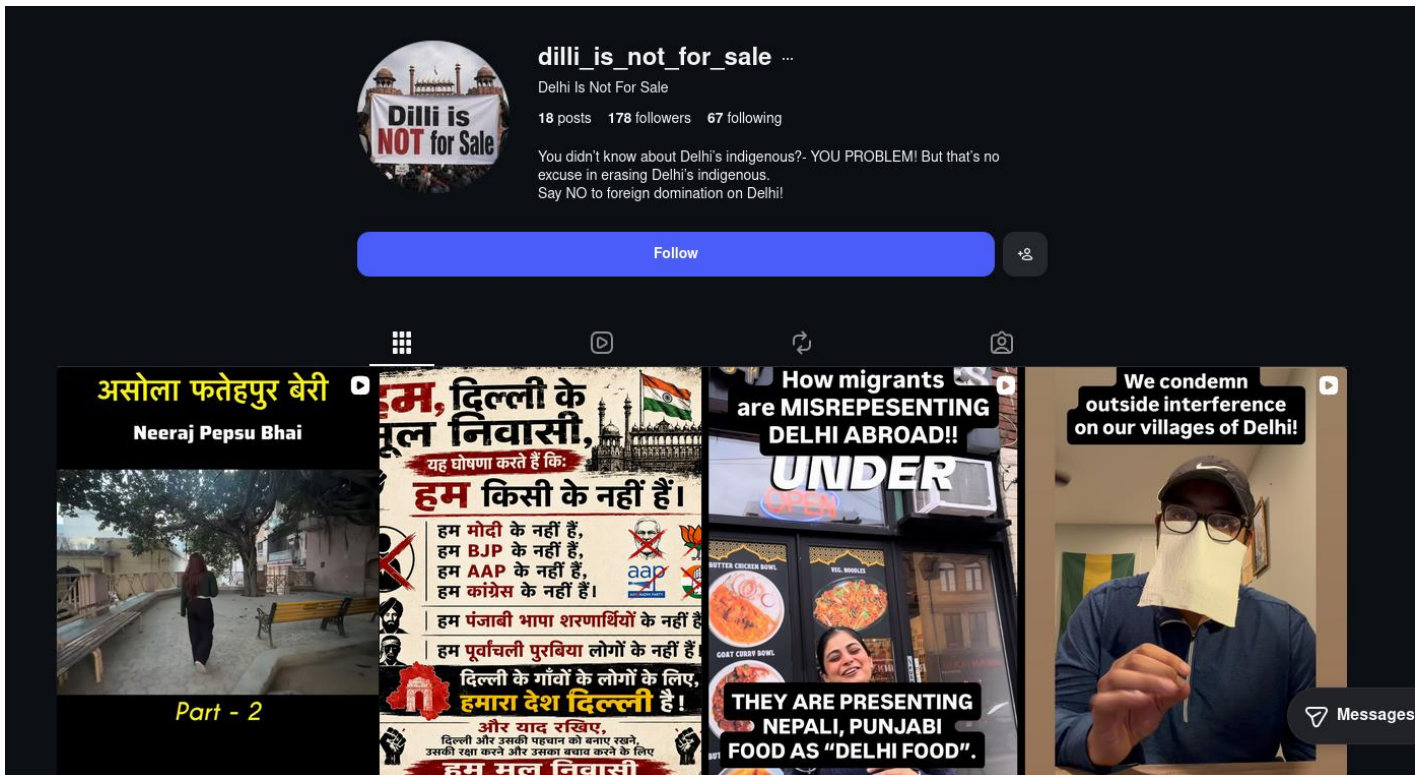

Target Asset	Recommended Mitigation Action	Enforcement Classification
delhinativeclub stopcolonizationofdelhi thinkingcraftsman dilli_is_not_for_sale	Submit formalized platform policy reports flagging Coordinated Inauthentic Behavior (CIB) and systematic location deception.	Platform Level Takedown
Historical Media Logs	Retain visual assets, cropped face templates, and timestamp offsets for future cross-matching against open database additions.	Intelligence Continuity

8. Attached Forensic Evidence Log (Screenshots)

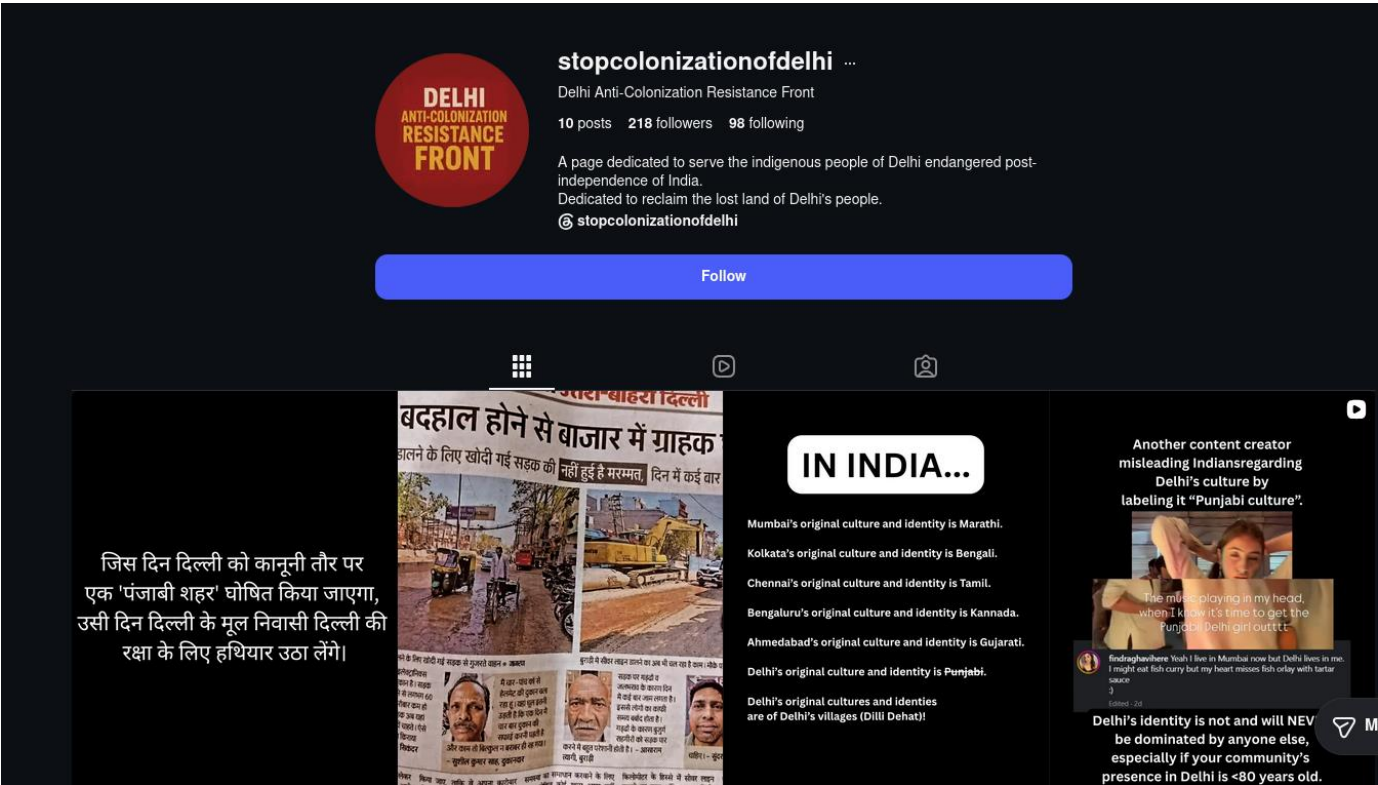

Evidence 1: delhinativeclub Profile Main Interface

Documents the core campaign anchor node showcasing 70.8K followers. The lower post layout displays the handler's shift toward operational concealment, demonstrating makeshift face-masking (white cloth) inside an indoor workstation.

Evidence 2: dilli_is_not_for_sale Front-End Node

Showcases the secondary operational distribution engine pushing targeted regional anti-migrant materials and localized cultural gatekeeping reels.

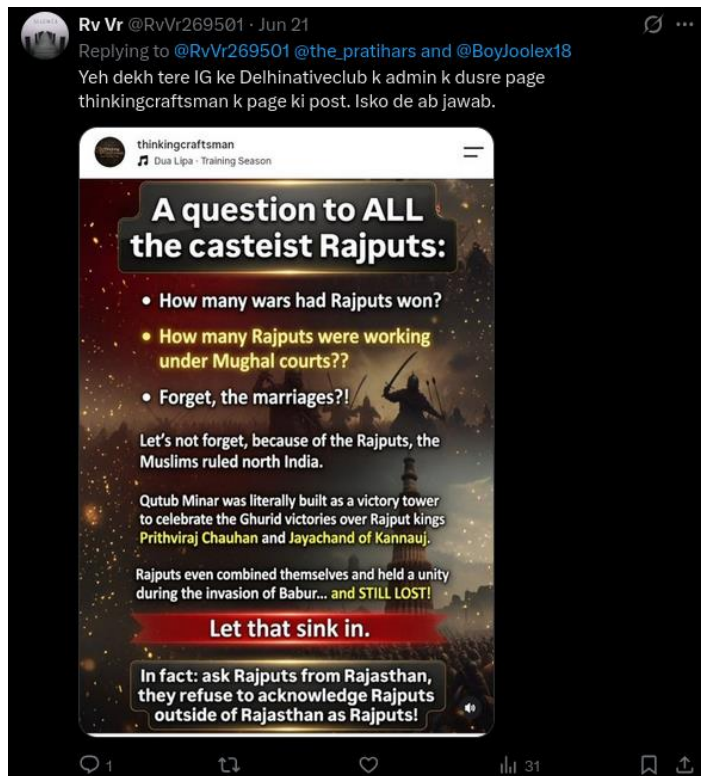

Evidence 3: stopcolonizationofdelhi Friction Feed

Details the front-line narrative delivery pipeline explicitly posting text designed to trigger local law-and-order tension between state communities.

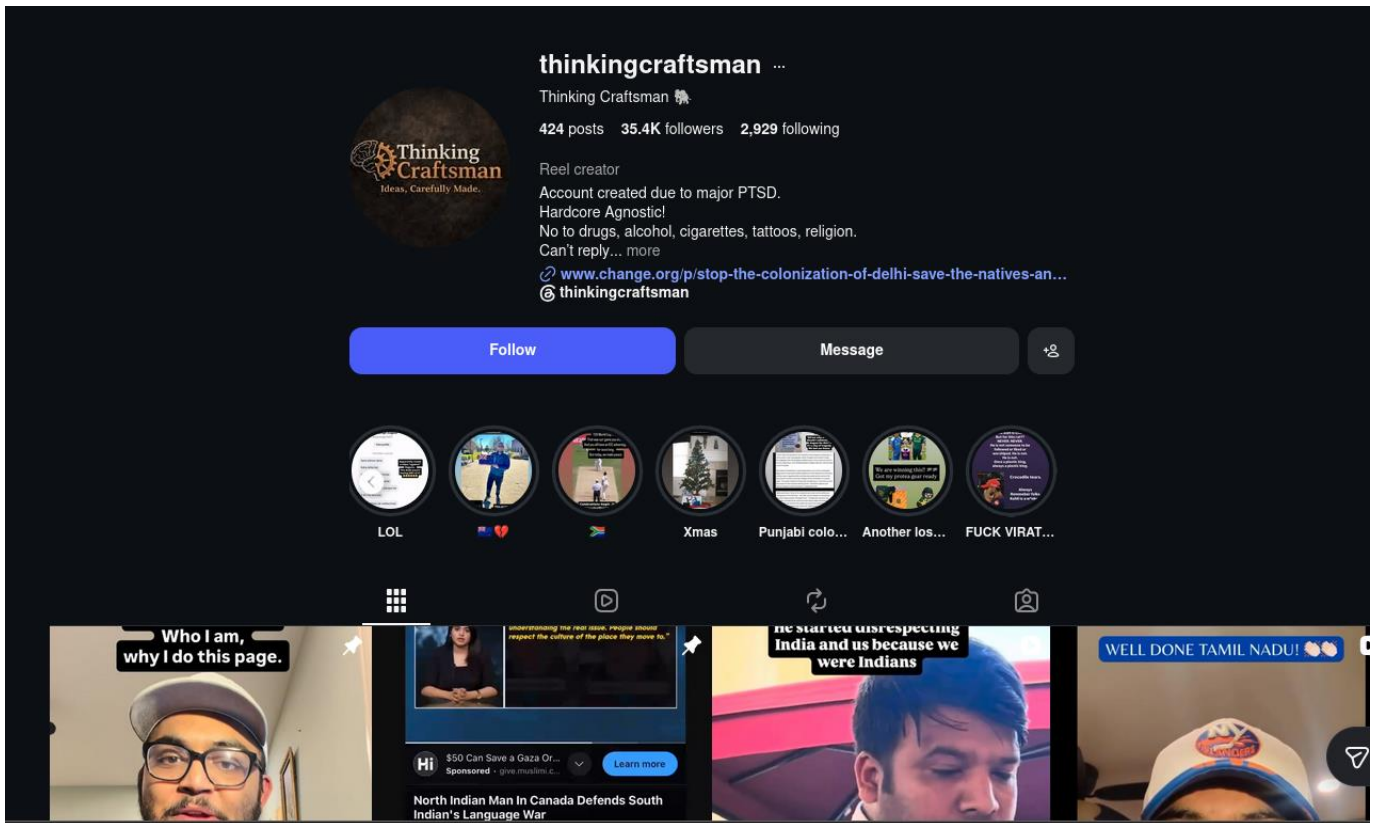

Evidence 4: Physical and Environmental Deception Identifiers

Close-up video frames showing the operator utilizing a makeshift paper tissue mask to obscure their facial biometrics while broadcasting inside a vehicle. The vehicle's distinct left-hand drive (LHD) dashboard structure, interior glass canopy, and visible background snowbanks completely falsify the profile's claims of operating out of Palam, Delhi, definitively tracking the uplink node to North America.

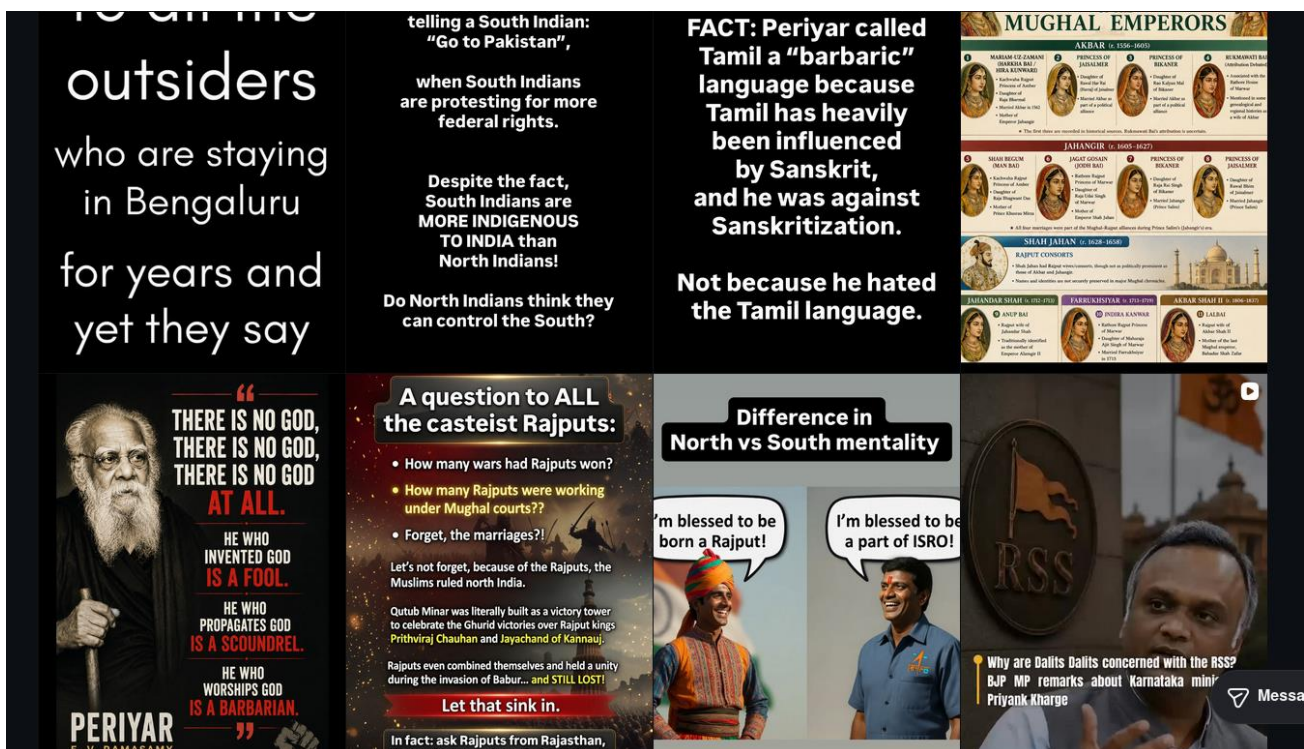

Evidence 5: Cross-Platform Mapping Records

Public tracker logging showing target audience tracking and cross-administrative link transparency connecting the handle structures across networks.

Evidence 6: thinkingcraftsman Anchor Profile

The main campaign origin node profile interface, housing the direct public hyperlink out to the background signature gathering base.

Evidence 7: Historic Polarization Strategy Files

Exposes background grid posts explicitly engineered to manufacture a South India vs. North India war narrative. The content is optimized to amplify regional animosity, using provocative geographic propaganda arrays to pit demographic blocks against each other to destabilize public order.

STOP THE COLONIZATION OF DELHI

PROTECT OUR NATIVE VILLAGES AND PEOPLE

Stop the Punjabi Colonization of Delhi- Save the Natives and our Land/Culture.

 Pratyush Yadav started this petition!
9 months ago

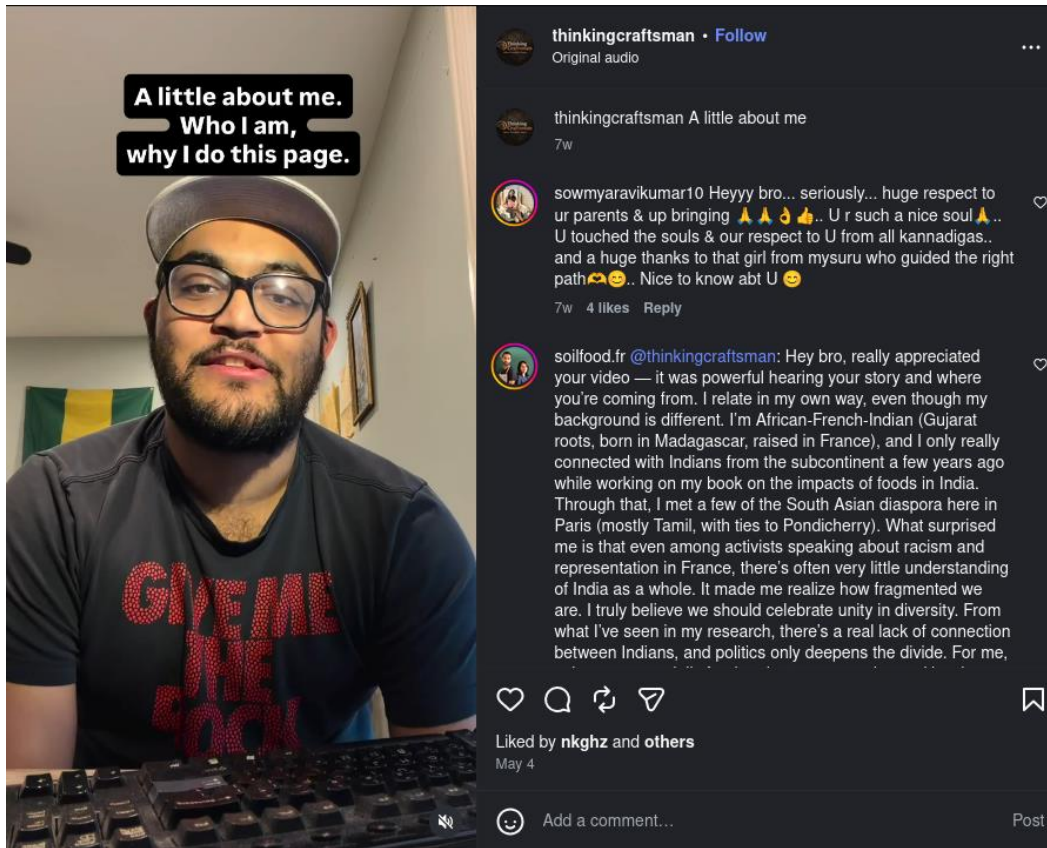

Pratyush Yadav

📍 Palam, Delhi, India

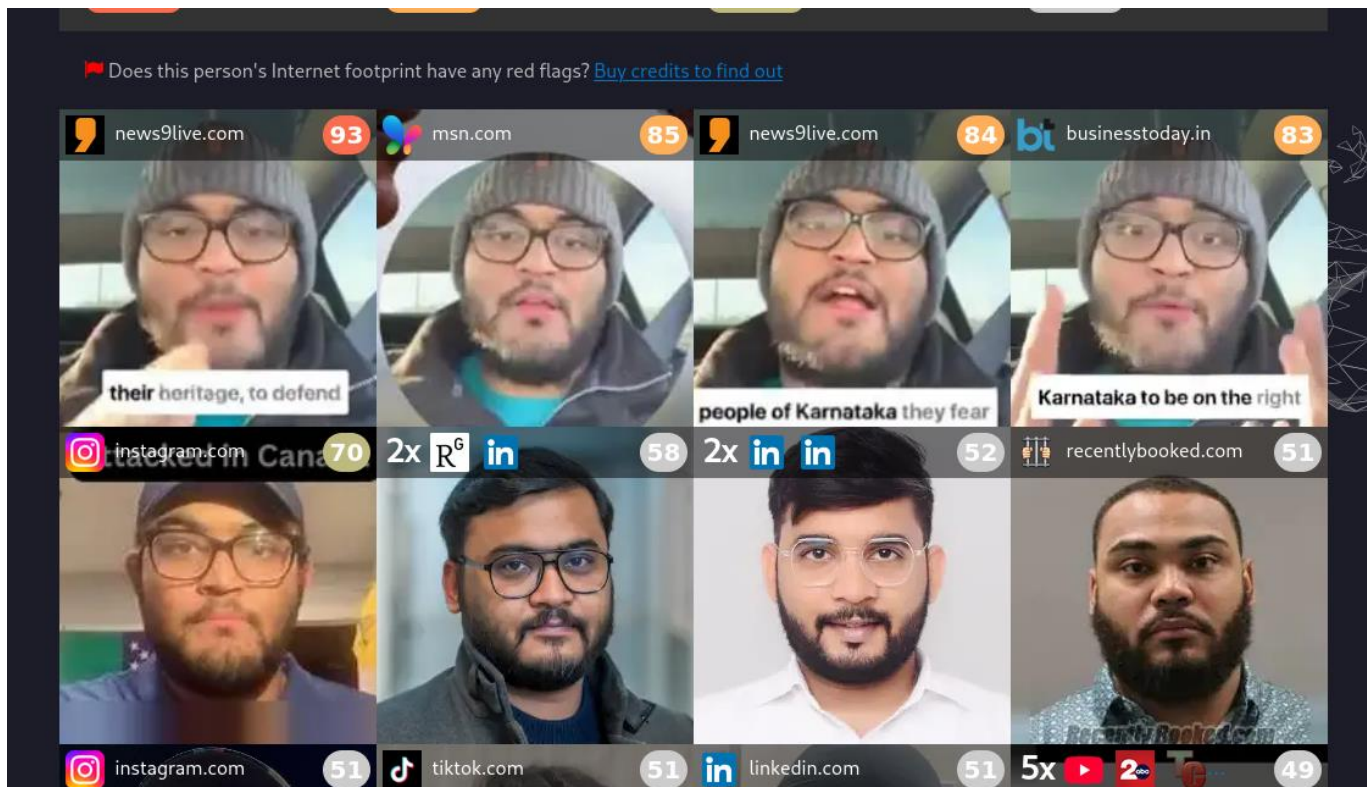

Evidence 9: Registration Identification Metrics

Change.org backend metadata fixing the identity marker 'Pratyush Yadav' to the deployment profile, listing the proxy baseline location as Palam, Delhi, India.

Evidence 10: Primary Unmasked Biometric Footprint

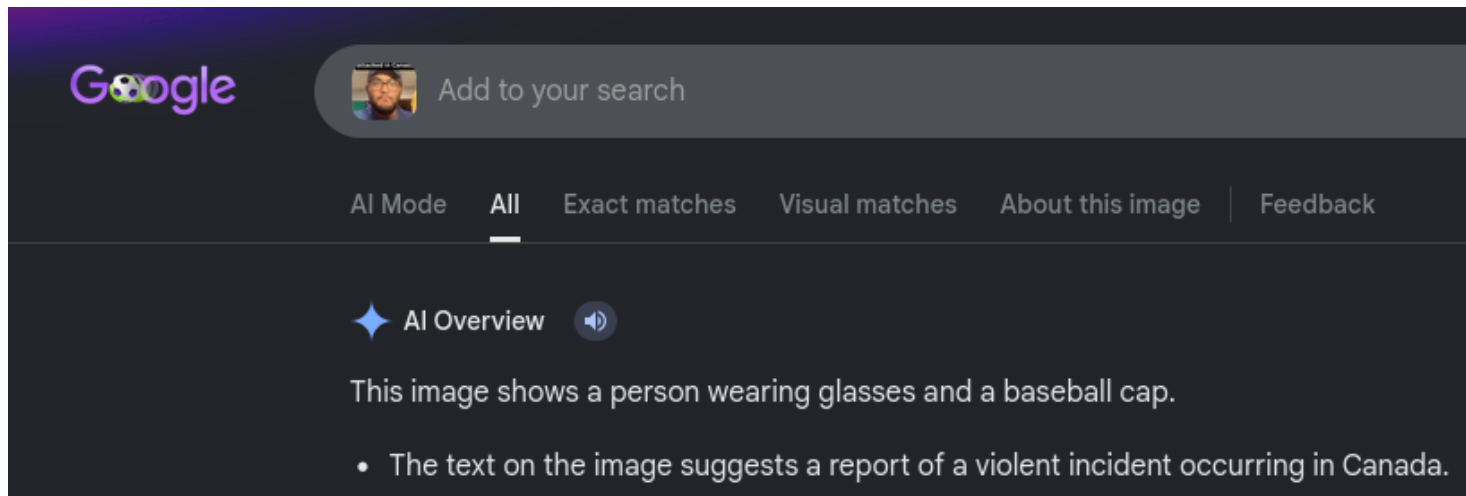

The foundational OPSEC failure: Broadcast video frame capturing the operator completely unmasked, fixing facial geometry, glasses, hair layout, and workstation background characteristics before masking policies were enacted.

Evidence 11: Global Media Visual Indexing Matches

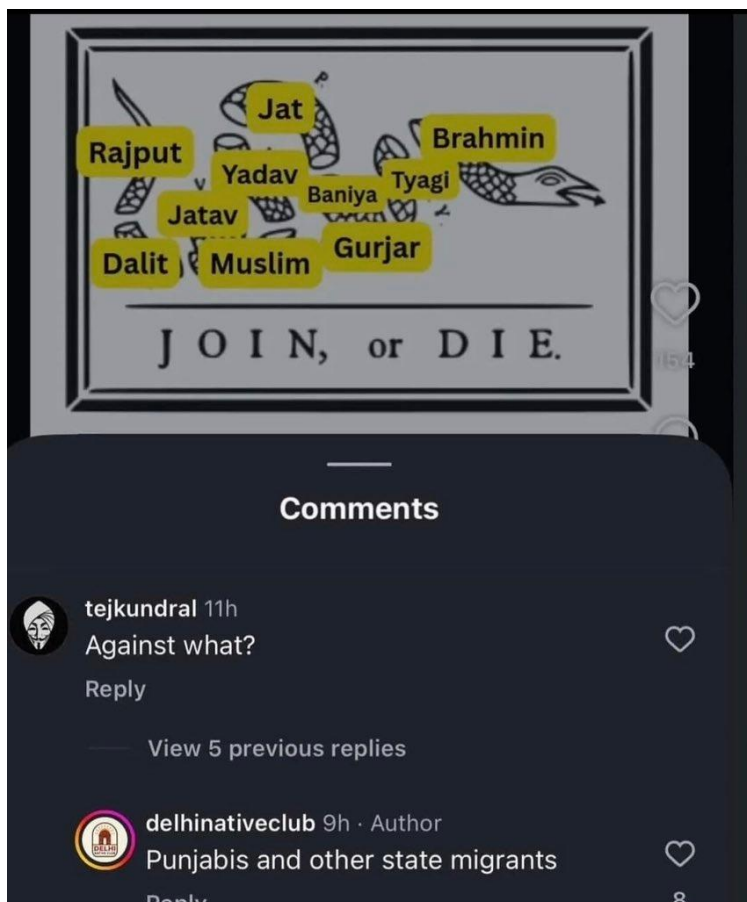

Facial matching engine dashboard capturing the target's unmasked facial structure indexed directly across international

syndicates (MSN, News9Live) regarding an incident abroad.

Evidence 12: Google Visual Index Core Text Layer Extraction

AI textual layer mapping confirming Google's visual indexing core identifying the frame as matching records indicating a violent incident occurring in Canada.

Evidence 13: Targeted Adversary Profiling

Public comment capture verifying the primary account handler's explicit intent to orchestrate regional polarization, stating in plain text that the operation is directed against "**Punjabis and other state migrants.**" The asset catches the deployment of a modified historical mapped to specific demographic blocks to incite community friction.
